The basis of a time domain stability analysis is an array terminology are used for of equally spaced phase ( really time error ) or fractional frequency deviation data frequency stability arrays, x and y, respectively, where the index i refers to data points in time. These analysis. i i data are equivalent, and conversions between them are possible. The x values have units of time in seconds, and the y values are ( dimensionless ) fractional frequency, f f. The x ( t ) time fluctuations are related to the phase fluctuations by ( t ) x ( t ) 2 where is the carrier frequency in hertz. Both are commonly , called phase to distinguish them from the independent time variable, t. The data sampling or measurement interval, , has...
