It is found in small quantities in other places, but not to a sufficient extent to make it practicable at this time for production in great quantities for airships. The method by which this gas is obtained is to subject the natural gas to high pressure and low temperature which, when it reaches a certain point, solidifies the ordinary natural, or coal gas as it is called, leaving the helium still free. It is then drawn off and put into tubes. This gas may be mixed with about eighteen per cent of hydrogen and still retain its non-inflammable qualities. The United States Government is now experimenting very successfully with the production of this gas, and some civilian companies are projecting its extraction on a commercial basis, being convinced...
